# DADDY TALK

GIVE HERD BULL ATTENTION

From Birth He Should Be Given Best of Care and Feed to Make Maximum Development.

(By W. W. SWIFT, Missouri Agricultural College)

It is a well known and very true saying that "the sire is half the herd," yet this important "half" seldom receives the attention he deserves. From birth, the bull should be given the best of care and feed in order that he may make the maximum growth and development. He should receive plenty of skim milk and grain and be treated as well if not even better than the beef calves.

At the age of five to six months he must be separated from the other calves. From this time on he must receive

First Futurity Shorthorn.

calve regular exercise and must be gently handled. When he is ten to twelve months of age he may be given light service—possibly one cow every three or four weeks. From the age of twelve to sixteen months this service may be increased to one cow per week.

A satisfactory feed for a mature bull is alfalfa or clover hay and a grain mixture of corn, with oats or bran. A bull must have plenty of exercise. He does not need to be housed in a warm barn but is kept in the best condition when given a dry lot open shed with a postlock attached so that he can go in or out at will.

Every mature bull should have a ring in his nose. There is some difference in opinion in regard to debarking but it is always safer to handle a bull without horns.

## DAIRY COWS RELISH SILAGE

In Feeding Test 17 Per Cent More Milk and 28 Per Cent More Butterfat Obtained.

Cows fed a ration composed largely of silage produced 17 per cent more milk and 28 per cent more butterfat than those given a ration consisting mainly of grain in a feeding test conducted for 121 days at the Ohio experiment station. The silage ration was also cheaper for milk production.

The cows gained nearly 8 per cent in milk yield when put on the silage ration. They produced butterfat at a cost of 13 cents a pound, while the cost of a pound from the cows fed mainly grain was 22 cents. There was little difference in the gains in live weight between the two lots.

In addition to 58 pounds of silage and 8.5 pounds of hay, the one lot received only four pounds of grain consisting of oatmeal and bran. The grain-fed lot received only 12 pounds of corn stover and hay but 15.5 pounds of a grain mixture of oatmeal, corn meal and bran.

## ESTIMATED VALUE OF COWS

Total Yearly Product of \$56.09 Given by New York College of Agriculture—Cost of Keep

Estimates on the value of the average dairy cow's product in New York State, made by the college of agriculture, give a yearly total of \$56.09. Costs of maintaining her are estimated at \$61.85, not including the cost of labor.

The difference, amounting to only \$45.25 per cow, would give to the man who cared for 20 cows a yearly value of \$855, which is less than the lowest wage paid to ordinary farm labor.

## SECURE BEST COW POSSIBLE

If One Cannot Get Good Animal, Then Take an Ordinary One—Get a Start Somehow.

Get a good dairy cow if possible. If one cannot get a good cow, then get an ordinary cow, one that is healthy, one that will breed, and then try to get her mated to a good bull.

If one cannot buy a cow giving milk, then buy a heifer. If a heifer cannot be purchased, then buy a heifer calf. Get a start somehow.

There is only one sensible reason for so many men opposing woman suffrage. They know if women are given the ballot there will be a house-cleaning, and most men dread this day.

## BABY TOO WEAK TO CRY

Mrs. E. S. Putnam of Chippewa Falls, Wisconsin, writes us: "Little Baby James came to us one Friday afternoon in a most precarious condition—a sad case of malnutrition, being too weak to even cry. The doctor called and at once prescribed Thompson's Food (Peptonized)."

"Sunday morning we weighed him (he was four months old, but just an infant) and he weighed six pounds. The following Sunday he weighed again and tipped the scales at eight pounds—a gain of two pounds in one week. Began to improve immediately and was soon on the way to healthy babyhood."

This unsolicited letter is one of many that we receive from week to week.

Thompson's Food (Peptonized) is not a milk modifier, but a complete food in itself. It is very easily prepared by the mere addition of water. Its use eliminates the danger usually associated with the local milk supply.

Try a 50c package with our guarantee of satisfaction.

RICHMOND DRUG CO., RICHMOND, KY.

## NEW HOME

"I'll get it for my wife"

NO OTHER LIKE IT. NO OTHER AS GOOD.

Purchase the "NEW HOME" and you will have a life-long friend. The elimination of soap expense by superior washing and best quality of material makes life-long service at minimum cost. Having the "NEW HOME" is a guarantee for all time.

Know the world over for superior sewing qualities. No other sewing machine so good.

## BRONZE TURKEY BEST KNOWN

Male Bird of Breed Sometimes Reaches Enormous Size—Do Not Bear Confinement Well.

The largest and perhaps the best known of the domesticated turkey is the Bronze. The male bird of this breed reaches an enormous size sometimes. The standard weight for the tom is 35 pounds and for the hen 20 pounds.

Generally the heavier weights are found among the breeding birds, and are not for sale. As a matter of experience breeders find that the greatest demand for the holiday trade is for the smaller birds suitable for a dinner for an ordinary family.

The plumage of the Bronze is very attractive. The feathers are bronze or dull black with bands of white across. The Bronze that gives pleasing color effects.

One common objection has been that the Bronze hen is not a very good layer. But it is generally found that

Flock of Prize Bronze Turkeys.

laying is largely an individual characteristic. Many prefer the Bronze and generally this breed by far outnumbers the others on the holiday market.

The Bronze turkeys are close descendants of the American wild turkey, which is still found in some parts of our country. The young of the domesticated birds soon show a tendency to wander in search of food. They can fly to an astonishing height when it becomes necessary.

The young turkeys do not bear confinement well. For anything like satisfactory results they should range in the fields and pastures. They are very useful in keeping down insects that destroy crops, and many farmers' wives have sold enough turkeys during the season preceding the holidays to provide comforts and conveniences for the home.

## HATCHING IS "GREAT STRAIN"

Lice Working Unmolested While Hen Is Sitting Is Most Responsible for Poor Condition.

The average poultry man will say that hatching is a "great strain" on a hen, and the condition of some of the birds on finishing their hatches seems to bear out this statement. But the harm done by the lice working unmolested while her motherly instinct keeps her busy is more responsible for her run down condition than the energy required in the actual work of incubating the eggs.

The dusting with lice powder should be done not only at the beginning of the hatch, but about once a week throughout the sitting period.

## TO ERADICATE CHICKEN LICE

Sodium Fluoride Found to Be Efficient by Entomologists of Agricultural Department.

Entomologists of the United States department of agriculture have demonstrated that all species of lice which infest poultry may be quickly destroyed by the application of a very small quantity of sodium fluoride, according to the annual report of the chief of the bureau of entomology just issued.

## SUPERIOR FEED FOR CHICKS

Corn Bread With Egg in It Is Recommended—Pasteurize Everything for First Month.

A good feed for newly hatched chickens is corn bread with egg in it. Until they are a month old, everything fed to them should be cooked or pasteurized (baked a little in the oven) to kill all germs of disease, and if milk is used for moistening, breast crumbs, it is best to boil it.

Hemp seed has taken another jump. It is now selling at \$14 a bushel, the highest ever.

## THE BEST PRINTING AT LOWEST PRICES—at this office.

## LIVE STOCK

KEEPING BULL IN CONDITION

As General Rule Animals Are Altogether Too Thin In Flesh To Do Justice to Themselves.

Many a breeder of improved stock has fallen just a little short a success through a wrong notion of what constitutes breeding condition. When we visit a breeder for the purpose of buying a young bull, and he remarks on the way to the barn, "I don't pamper my young cattle; I keep them in just good breeding condition," we find as a rule that his bulls are altogether too thin in flesh to do justice to themselves or to him.

He is a rare man who can form an accurate judgment of a young bull when he is thin. The average buyer wants to see young stuff in good, smooth flesh. This does not mean over-fat; but there are very few young bulls which have been injured by carrying too much flesh during the first year of their life. It takes feed, and it takes a young bull in plenty of it, to prevent a young bull in attractive sale condition; but it pays even in these days of high-priced feed; and the sensible buyer will demand it, first, because it indicates that the bull is a good feeder, and second, because it gives him a fair opportunity to judge of its quality. Improved stock is fetching good prices, and those who are preparing young stuff for sale can well afford to feed liberally. In fact, they can much better afford to do this than not. It is all well enough to carry through the breeding cows in just good, strong breeding condition, but with young stuff a liberal hand has its reward.—Wallace's Farmer.

## WARMING WATER FOR CATTLE

Tank May Be Built With Board Sides and Galvanized Iron Bottom on a Brick Foundation.

Have you noticed that your stock drink less water when it is too cold? Yet plenty of water is necessary for their well-being. Water can be kept at a sufficiently high temperature for cattle at very little expense in a properly-constructed tank.

The tank may be built with board sides and galvanized iron bottom on a brick foundation.

that it can be placed on a brick foundation and a small fire built under it. The stovepipe should come through the foundation close to the bottom of the tank and ought to give plenty of clearance to the board side.

## REMEDY THAT ALWAYS CURES

Very Best Treatment for Pig-Eating Sow Is to Fatten Her Up and Sell Her for Pork.

Experts in hog psychology have offered many recipes for curing the pig-eating sow. They vary all the way from a liberal ration of salt pork to a liberal application of a club.

The very best treatment for such a sow, says one old friend, experience, is to feed liberally on corn, run a sharp knife into her throat at a point well known to all her best friends, dash the carcass into scalding hot water, clean outside and in, trim, salt and smoke, and serve with eggs right off the nest and skillet. It is a sure and happy cure.

## TREATMENT FOR CHILLED PIG

Young Animals May Be Quickly Revived by Immersing in Water of About Blood Heat.

Pigs that have been chilled may be quickly revived by immersing them in the mouth in warm water (not hot, but about blood heat). This is much to be preferred to warming them by a fire because the heat is applied so much more uniformly and quickly. The supposition that such pigs never amount to anything is altogether incorrect, for they generally will live and thrive, though to get results has usually been due to the pig's having been actually frozen or to the use of water that was too hot.

## LOSSES IN SPRING LITTERS

Much Can Be Avoided by Having Sow Farrow in April—Time of Mating Will Regulate This.

Heavy loss in spring litters can be avoided by not having the sows farrow too early. If you have not first-class facilities to take care of March litters, then hold the mating until December 6, which will bring farrowing April 1. The period of gestation in sows is 115 days.

Hundreds of lambs and many ewes died from exposure during the cold weather.

## SHOE POLISHES

"EASY TO USE" Give a quick lasting shine and preserve the leather.

FF DALLEY CO. OF NEW YORK INC., BUFFALO, N. Y.

## ODD FACTS.

The carnation was cultivated by the ancient Greeks, who gave it the name of Dianthus, flower of the gods. They used it for making garlands, whence the name "carnation" was derived. It was parakeet of at great banquets as a kind of salad.

The Cape emory is the only native bird of Africa that is known for its sweet and continuous song. It is to be found even in the Orange River colony.

An authority on finance has been investigating American millmairs, and finds that all except twenty start-of life as poor boys, and all except forty have contributed to their communities, but that only one rich man's son in 17 dies rich.

Jim Allen in the Cynthiana Democrat says: "If Luke McKee wants a good Kentucky cook, he can furnish him one in the person of Tinky Green, who is black." We will stake our money on Bachelor Jim every time. He always knocks the perimmons.

The Public—Take Notice.

I am now prepared to do any kind of concrete work from a common walk to a silo.

Gate posts and water tanks a specialty. All work first-class. Estimates furnished and business solicited.
